

# How Keypads will revolutionize your school

## Streamlining your cafeteria payment process

Electrone saves you time and money with our PIN entry solution for schools, the desktop keypad. Easy to install and processing transactions in seconds, our desktop keypads are durable and reliable. Electrone is the world leader in high performance computer peripheral design and manufacture. Our electronic equipment is used across the globe in a wide range of industries.

The most time-consuming element of the cafeteria lunch queue is processing payments. Students start counting out loose change, then they miscount, recount and eventually hand over their payment. Some high schools have 1,400 or more students going through the school cafeteria during their lunch sessions. The elimination of slow and unhygienic cash payments requires account systems and PIN entry method.

Electrone offer schools the opportunity to streamline your lunch process by helping to remove cash from the process and installing hard-wearing desktop keypads. Students collect their lunch, enter their unique PIN and they're done. No cash, no errors and time saved. Payment is recorded electronically and billed to the student's account.

## A feature-rich peripheral for your school

Here are some of the features you will enjoy with Electrone desktop keypads:

- \* Clean and functional design
- \* Plug and play compatibility (may require driver)
- \* 32 character back-lit display

*Contd./...A feature-rich peripheral for your school*

- \* Tactile rubber buttons for easy-clean, or hard keys with smooth washable surface
- \* Powered by PS/2 pass-through or optional 5v DC input
- \* 12 month limited warranty
- \* For passwords, display can repeat pressed characters or show asterisks for security

## Connectivity

We understand that every school is different and so we offer 3 types of desktop keypad depending upon your connection needs. We supply units with serial, USB / VCP, USB / HID, or TCP/IP POE, (requires connection to POS switch) and traditional as well as serial connections.

More dependable than finger- and palm-print scanners, Electrone desktop keypads are robust and tough, a sound investment for schools.

## Benefits to students and parents

Recording payments at point of sale with a keypad gives students and parents, peace of mind. Having desktop keypads prevents any undue stress to students caused by inaccurate transactions that happen all too often with cash payments. Keypads like the Electrone 735 offer seamless integration with cafeteria or point-of-sale software to increase effectiveness and reduce administration.

## Desktop keypads in your school

Having Electrone desktop keypads in your school means you have an accurate and user-friendly payment gateway for your students to purchase their meals swiftly and efficiently. Payments are made securely on the spot from any cafeteria or shop on your campus.

## Conclusion

Electrone provides the ideal solution for PIN entry in a closed account environment, such as school or university cafeterias. Our computer peripherals are high performance and used around the world. Streamline your cafeteria payment process with Electrone desktop keypads. If you want Electrone desktop keypads in your school, we will be happy to discuss your needs on +1-561-395-3398.
